

Solaris - image packaging system

1.pkg publisher pkg set-publisher -p *repo_url* pkg unset-publisher *repo_name*
pkgrepo info -s *repo_url*

2.pkg refresh pkg update -nv pkg rebuild-index

3.pkg search *keyword* pkg install -nv *pkg_name* pkg uninstall *pkg_name*

4.pkg list pkg info pkg info *pkg_name* pkg info -r *pkg_name* pkg contents
pkg_name pkg contents -r *pkg_name* pkg search -l /path/to

Solaris – old software management

1.pkgadd -d /path/to *pkg_name* pkgrm *pkg_name*

2.pkginfo pkginfo -l *pkg_name* pkgchk -l *pkg_name* pkgchk -l -p /path/to

FreeBSD – pkg

1./etc/pkg/FreeBSD.conf /etc/local/etc/pkg.conf /etc/local/etc/pkg/repos/xx.conf

env: PACKAGESITE MIRROR_TYPE SIGNATURE_TYPE FINGERPRINTS
ASSUME_ALWAYS_YES REPOS_DIR

2.pkg update pkg upgrade pkg stats

3.pkg search *pkg_name* pkg install *pkg_name* pkg delete *pkg_name* pkg
autoremove

4.pkg info pkg version pkg info -l *pkg_name* pkg which /path/to

FreeBSD-old

1.env: PACKAGESITE

2.pkg_add *pkg_name* pkg_add -r *pkg_name* pkg_delete *pkg_name*

3.pkg_info pkg_version -c pkg_info -l *pkg_name* pkg_info -w /path/to

IMPORTANT:

1./etc/group wheel:*:0:root,username

pw groupmod wheel -m username

2./etc/resolve.conf nameserver 127.0.0.1 cancel

3.mount -t cd9660 /dev/cd0 /path/to
